

# Radon

## The Facts

Today, it is difficult to find anyone whose life has not been affected by radon-induced lung cancer. Sadly, most people have no idea the impact radon has had on their life, or the life of someone they love. **The simple fact is:** Each day, radon-induced lung cancer claims more than 57 lives in the United States. This year alone, more than 21,000 men and women will fall victim to this deadly disease. The good news is radon-induced lung cancer can be limited through proven, cost-effective testing and mitigation techniques.

# Radon

## The Facts

### Radon is a naturally-occurring, cancer-causing radioactive gas

- Lung cancer is the leading cause of cancer deaths in the United States — greater than breast, prostate, kidney, liver, colon and melanoma cancers *combined*.
- Radon is the leading cause of lung cancer among non-smokers, second overall only to smoking — 1 in 7 of *all* lung cancer deaths are attributed to radon exposure.
- If you smoke and your home has a radon problem, your risk for lung cancer is greater.

### Radon is found all over the United States

- Radon enters homes through foundation cracking, expansion joint gaps and other areas — such as sump pits and plumbing penetrations — where it can be trapped in toxic levels.
- Across the country, 1 in 15 homes has a radon problem — elevated levels have been found in every state.
- The US Surgeon General and EPA recommend fixing homes with radon levels of 4.0 pico curies per liter of air (pCi/L) and higher.

### You should test your home for radon

- The US Surgeon General and EPA recommend all homes be tested for radon — this is the only way to know if you are at risk.
- Testing is simple and affordable. Test kits are available from a variety of sources, including health departments, state radon programs and retail stores. Professional testing is also available from radon measurement contractors in your area.

### You can fix a radon problem

- If you have a radon problem, your home can be fixed using proven, cost-effective mitigation techniques. Professional mitigation is available from radon mitigation contractors in your area.

Radon Tee: World Trek 2010™ is sponsored by Cancer Survivors Against Radon™ (CanSAR), a non-profit organization dedicated to preventing radon-induced lung cancer and saving lives through education and awareness.
